Accessing Email from your Domains with your ISP

If you have POP3 email accounts with your own domain, with most ISPs you retrieve your email using your domain's incoming mail server, and you send email using your ISPs outgoing mail server.

For most ISP's you use:

incoming: www.yourdomainname.com or mail.yourdomainname.com
outgoing: use your IPS's outgoing mail server from the list above

Verizon

With Verizon you send and retrieve your domain email with your domain's mail server. [Learn more about Verizon...](#)

MSN

MSN allows you to retrieve email from your domain POP3 email accounts, but does not allow you to send email from your POP3 email accounts.
